

## Recognizing Color 1 & 2

This Skills Assignment is designed to:

- Help you learn how to use the digital cameras.
- Help you demonstrate that you can download the photos from the cameras.
- Use PhotoShop to manipulate the images you have taken.
- Help you recognize and use color in an effective manner.

Using the digital cameras, you are to take 15 color photos for each of these assignments.

**THIS ASSIGNMENT WILL BE DONE DURING CLASS TIME OVER THE NEXT WEEK.**

CS Due:

### Recognizing Color 1

1. Select one of the three primary colors (red, blue or yellow).
2. Shoot a minimum of 15 color pictures in which your selected color is the dominant element.
3. If you selected “blue” I would expect to see the various **shades** of blue.
4. You should apply the rules of composition as well as strive to capture the texture of the color. Extremely sharp focus is essential. You will also need to have a good light source (preferably not the on-camera flash).
5. Make a Photoshop **CONTACT SHEET**. See your teacher for printing instructions.

### Recognizing Color Part 2

Repeat the activity from above but this time select a complimentary color to the one you have already done. If you selected “blue” then the complimentary color could be “orange”. When shooting these photos I would like to see you apply different **textures** (wet, smooth, rough) to the color you have chosen.

Download and create a second contact sheet for these photos.
